FOR IMMEDIATE RELEASE

Zokero Inc. Announces the Release of SeisWare 7.0

CALGARY, Alberta. December 1, 2008. Zokero announced today that it has released SeisWare 7.0. This version of the PC based seismic interpretation software contains brand new functionality with the 3D Seismic Visualizer and Data List Manager. The new version also includes extensive software enhancements to horizon attributes, time slices, log editor, well logs, culture editor, and data import and export.

"SeisWare 7.0 is a major release for Zokero. We've included extensive functionality upgrades, customer requested enhancements, and an updated look and feel to the interface", says Ed VanWieren, Zokero's President.

"Customer satisfaction is extremely important to us, so SeisWare 7.0 has been developed based on user feedback. The new version has been designed to make the software more efficient and easy to use." says VanWieren.

SeisWare 7.0 is available to existing customers at no cost and is an all inclusive package to new users at a low annual price that includes support, maintenance, and all product upgrades.

Zokero Inc. is a Calgary based software development company that develops, markets, and supports SeisWare. SeisWare is a comprehensive, PC based, 2D/3D seismic interpretation package used by over 600 geoscientists world wide, with customers ranging from large multi-national oil and gas producers to independent geophysical consultants.
