

FOR IMMEDIATE RELEASE

SeisWare International Inc. Announces the Release of SeisWare 7.1

CALGARY, Alberta. November 19, 2009. SeisWare International announced that it has released SeisWare 7.1. This version of the PC based seismic interpretation software contains many major enhancements including integration with IHS PETRA® geological software, ability to link to ESRI shapefiles or SDE layers, custom coordinate system, and compatibility with Windows 7®.

"The release of SeisWare 7.1 demonstrates our commitment to support openness and integration between our software and other industry packages," says Shayne Stogrin, VP Development.

"By providing data import and export to other software packages such as PETRA, we're ensuring that geoscientists have all the tools they need to make efficient, reliable and effective exploration decisions." says Stogrin.

The new version also includes extensive software enhancements to the 3D Visualizer, cross plotting, custom coordinate system, time-to-depth and basemap functionality.

SeisWare 7.1 is available to existing customers at no cost and is an all inclusive package to new users at a low annual price that includes support, maintenance and all product upgrades.

SeisWare International Inc. is a Calgary based software development company that develops, markets, and supports SeisWare seismic interpretation software. SeisWare is a comprehensive, PC based, 2D/3D seismic interpretation package used by geoscientists world wide, with customers ranging from large multi-national oil and gas producers to independent geophysical consultants.
